	3	C/D	Auto current down	Not use	Use

TEST

- Self diagnosis function is for motor and driver test.
- This function makes the motor rotate with 30rpm in full step. Rotation speed varies with resolution settings.
- Rotation speed = 30rpm/resolution
- In 1-pulse input method, it rotates to CCW, and in 2-pulse input method, it rotates to CW.
- *Be sure that the TEST switch is OFF before supplying the power.

If the TEST switch is ON, the motor operates immediately and it may be dangerous.

• 1/2 CLK

- 1/2 CLK switch is to select pulse input method.
- 1-pulse input method: CW → operating rotation signal input, CCW → rotation direction signal input ([H]: CW, [L]: CCW)
- 2-pulse input method: $CW \rightarrow CW$ rotation signal input, $CCW \rightarrow CCW$ rotation signal input.

• C/D (auto current down)

- This function is to reduce the current provided for motor automatically for preventing severe motor's heat when motor stops.
- If motor RUN pulse is not applied, the current provided for motor reduces as the set STOP current.
- *Be sure that when motor RUN current is reduced, the stop torque of motor also reduced.

*Set the STOP current by the STOP current switch.

© Setting RUN current

24 F 0 / Pu	Switch No.	0	1	2	3	4	5	6	7	8	9	А	В	С	D	E	F
	Current (A/Phase)	0.4	0.5	0.57	0.63	0.71	0.77	0.84	0.9	0.96	1.02	1.09	1.15	1.22	1.27	1.33	1.4

• Setting RUN current is for the current provided for motor when the motor runs.

*When RUN current is increased, RUN torque of the motor is also increased.

When RUN current is set too high, the heat is severe.

*Set RUN current within the range of motor's rated current according to its load.

*Change RUN current only when the motor stops.

Setting STOP current

	Switch No.	0	1	2	3	4	5	6	7	8	9	A	В	С	D	E	F
○() ⊳	%	27	31	36	40	45	50	54	58	62	66	70	74	78	82	86	90

• Setting STOP current is for the current provided for motor when the motor stops for preventing severe motor's heat.

• This setting is applied when using C/D (current down) function.

- Setting value of STOP current is percentage (%) ratio of the set RUN current.
 - E.g.) Set RUN current as 1.4A and STOP current as 40%.
 - STOP current is set as 1.4A×0.4=0.56A

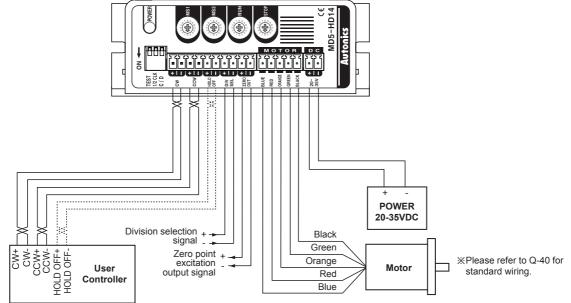

When STOP current is decreased, STOP torque of the motor is also decreased.

When STOP current is set too low, the heat is lower.

% Change STOP current only when the motor stops.

◎ Zero point excitation output signal (ZERO OUT)

• This output indicates the initial step of excitation order of stepper motor and rotation position of motor axis .

 This signal outputs every 7.2° of rotation of the motor axis regardless of resolution. (50 outputs per 1 rotation of the motor.)

E.g.) Full step: outputs one time by 10 pulses input, 20-division: outputs one time by 200 pulses input.

◎ HOLD OFF function

- This signal is for rotating motor's axis using external force or used for manual positioning.
- When hold off signal maintains over 1ms as [H], motor excitation is released.
- When hold off signal maintains over 1ms as [L], motor excitation is in a normal status.
- *Must stop the motor for using this function.

Refer to I/O Circuit and Connections.

Setting Microstep (microstep: resolution)

	-	-			-												
& F 0 / P	Switch No.	0	1	2	3	4	5	6	7	8	9	A	В	С	D	E	F
	Resolution	1	2	4	5	8	10	16	20	25	40	50	80	100	125	200	250
68L9	Step angle	0.72°	0.36°	0.18°	0.144°	0.09°	0.072°	0.045°	0.036°	0.0288°	0.018°	0.0144°	0.009°	0.0072°	0.00576°	0.0036°	0.00288°

Setting Resolution (same as MS1, MS2)

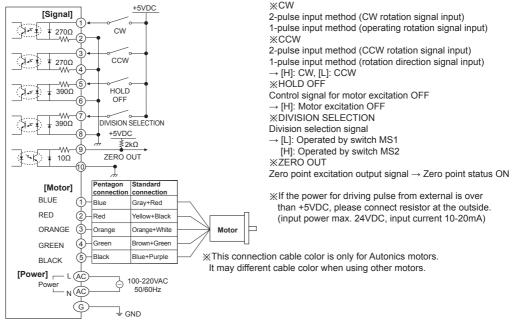

- The MS1, MS2 switches is for resolution setting.
- Select MS2 or MS2 by DIVISION SELECTION signal ([L]: MS1, [H]: MS2)
- Select the step angle (motor rotation angle per 1 pulse).
- The set step angle is dividing basic step angle (0.72°) of 5-phase stepper motor by setting value.
- The calculation formula of divided step angle is as follow. Set step angle = $\frac{\text{Basic step angle }(0.72^{\circ})}{\text{Basic step angle }(0.72^{\circ})}$
- When using geared type motor, the angle is step angle divided by gear ratio. Step angle / gear ratio = Step angle applied gear E.g) 0.72° / 10 (1:10) = 0.072°

*Must stop the motor before changing the resolution.

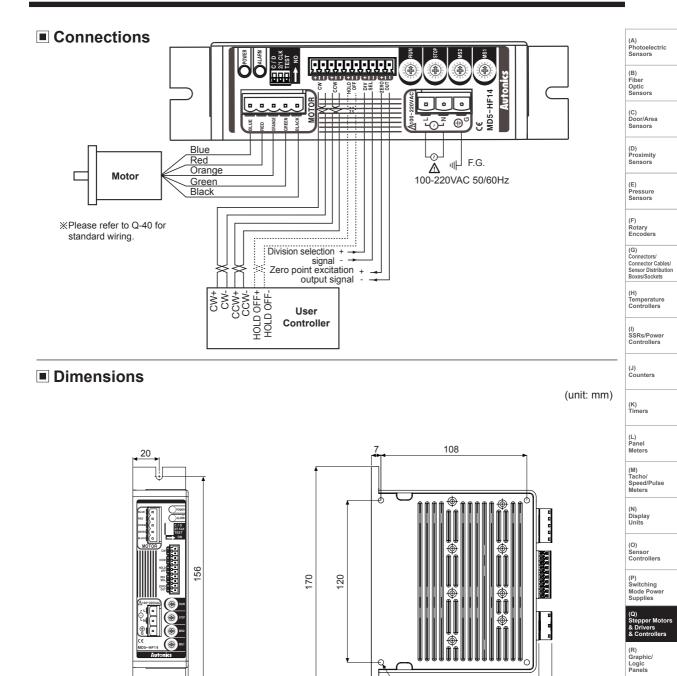

O Alarm output function

- Overheat: When the temperature of driver base is over 80°C, alarm indicator (red) turns ON and motor stops with holding the excision. Turn OFF the power and remove the causes. Turn ON the power and alarm output is OFF.
- Overcurrent: When overcurrent is applied from motor damage by burn, driver damage, or error, alarm LED (red) is flashed. When overcurrent occurs, the motor becomes HOLD OFF. Turn OFF the power and remove the causes to normal operation.

	1	TEST	Self diagnosis function	30rpm rotation	Not use
ON ON	2	2/1 CLK	Pulse input method	1-pulse input method	2-pulse input method
	3	C/D	Auto current down	Not use	Use

TEST

- Self diagnosis function is for motor and driver test.
- This function makes the motor rotate with 30rpm in full step. Rotation speed varies with resolution settings.
- Rotation speed = 30rpm/resolution
- In 1-pulse input method, it rotates to CCW, and in 2-pulse input method, it rotates to CW.
- *Be sure that the TEST switch is OFF before supplying the power.
- If the TEST switch is ON, the motor operates immediately and it may be dangerous.

• 2/1 CLK

- 2/1 CLK switch is to select pulse input method.
- 1-pulse input method: CW → operating rotation signal input, CCW → rotation direction signal input ([H]: CW, [L]: CCW)
- 2-pulse input method: $CW \rightarrow CW$ rotation signal input, $CCW \rightarrow CCW$ rotation signal input.

• C/D (auto current down)

- This function is to reduce the current provided for motor automatically for preventing severe motor's heat when motor stops.
- If motor RUN pulse is not applied, the current provided for motor reduces as the set STOP current.
- *Be sure that when motor RUN current is reduced, the stop torque of motor also reduced.

*Set the STOP current by the STOP current switch.

Setting RUN current

EEO/	Switch No.	0	1	2	3	4	5	6	7	8	9	А	В	С	D	E	F
	Current (A/Phase)	0.4	0.5	0.57	0.63	0.71	0.77	0.84	0.9	0.96	1.02	1.09	1.15	1.22	1.27	1.33	1.4

• Setting RUN current is for the current provided for motor when the motor runs.

*When RUN current is increased, RUN torque of the motor is also increased.

When RUN current is set too high, the heat is severe.

*Set RUN current within the range of motor's rated current according to its load.

*Change RUN current only when the motor stops.

Setting STOP current

EFO /	Switch No.	0	1	2	3	4	5	6	7	8	9	A	В	С	D	E	F
	%	27	31	36	40	45	50	54	58	62	66	70	74	78	82	86	90

• Setting STOP current is for the current provided for motor when the motor stops for preventing severe motor's heat.

• This setting is applied when using C/D (current down) function.

- Setting value of STOP current is percentage (%) ratio of the set RUN current.
 - E.g.) Set RUN current as 1.4A and STOP current as 40%.

STOP current is set as 1.4A×0.4=0.56A

When STOP current is decreased, STOP torque of the motor is also decreased.

When STOP current is set too low, the heat is lower.

*Change STOP current only when the motor stops.

5-Phase Stepper Motor Driver (1.4A/Phase, AC Power, Alarm Output)

O HOLD OFF function

- This signal is for rotating motor's axis using external force or used for manual positioning.
- When hold off signal maintains over 1ms as [H], motor excitation is released.
- When hold off signal maintains over 1ms as [L], motor excitation is in a normal status.

*Must stop the motor for using this function.

*Refer to I I/O Circuit and Connections.

O Setting Microstep (microstep: resolution)

(⊙ Setti	ing Micro	ostep	o (mio	crost	ep: r	esolu	ution)											C) Door/Area Sensors
		Switch No.	0	1	2	3	4	5	6	7	8	9	A	В	С	D	E	F	_	
		Resolution	1	2	4	5	8	10	16	20	25	40	50	80	100	125	200	250		D) Proximity
	468L9	Step angle	0.72°	0.36°	0.18°	0.144°	0.09°	0.072°	0.045°	0.036°	0.0288°	0.018°	0.0144°	0.009°	0.0072°	0.00576°	0.0036°	0.00288°		Sensors

Setting Resolution (MS1)

- The set step angle is dividing basic step angle (0.72°) of 5-phase stepper motor by setting value.
- The calculation formula of divided step angle is as below.

Set step angle = $\frac{\text{Basic step angle } (0.72^\circ)}{-}$ Resolution

 When using geared type motor, the angle is step angle divided by gear ratio. Step angle / gear ratio = Step angle applied gear E.g 0.72° / 10 (1:10) = 0.072^{\circ}

Must stop the motor before changing the resolution.

O Alarm output function

- Temperature Controllers • Overheat: When the temperature of driver base is over 80°C, alarm indicator (red) turns ON and motor stops with holding the excision. Turn OFF the power and remove the causes. Turn ON the power and alarm output is OFF. (I) SSRs/Power Controllers
- Overcurrent: When overcurrent is applied from motor damage by burn, driver damage, or error, alarm LED (red) is flashed. When overcurrent occurs, the motor becomes HOLD OFF. Turn OFF the power and remove the causes to normal operation.

Unit Description **MD5-HD14-2X**

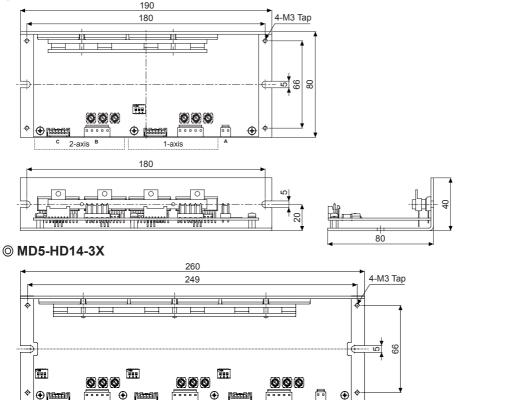

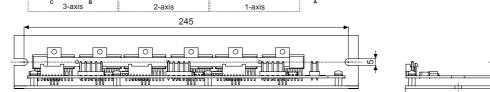

Autonics

Dimensions

OMD5-HD14-2X

(unit: mm)

1-axis

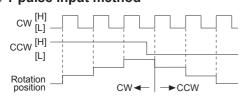

*Accessory connector specification

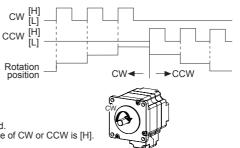

10000	2007/	Connector		Qty.			
Acces	soly	Manufacturer	Model No.	MD5-HD14-2X	MD5-HD14-3X		
А	Power 2-wire housing	Yeonho electronics	YH396-02V	1	1		
В	Motor 5-wire housing	Yeonho electronics	YH396-05V	2	3		
С	Signal 6-wire housing	JST	XAP-06V-1	2	3		
—	Power/Motor terminal pin	Yeonho electronics	YT396	12	17		
—	Signal terminal pin	JST	SXA -001T-P0.6	12	18		

Time Chart O 1-pulse input method

С

© 2-pulse input method

%Do not input CW, CCW signals at the same time in 2-pulse input method. It may not operate properly if another direction signal is inputted when one of CW or CCW is [H].

Cautions during Use (common Specifications of 5-Phase Stepper Motor Driver)

1. For signal input

- 1 Do not input CW, CCW signal at the same time in 2-pulse input method. Failure to follow this instruction may result in malfunction. It may not operate properly if another direction signal is inputted when one of CW or CCW is [H].
- ②When the signal input voltage is exceeded the rated voltage, connect additional resistance at the outside.

2. For RUN current, STOP current setting

- ①Set RUN current within the range of motor's rated current. Failure to follow this instruction may result in severe heat of motor or motor damage.
- @If motor stops, switching for STOP current executed by the current down function. When hold off signal is [H] or current down function is OFF, the switching does not execute. (except MD5-ND14)
- 3 Use the power for supplying sufficient current to the motor.
- Output: Check the polarity of power before operating the unit. (only for MD5-HD14, HD14-2X/3X, ND14)

3. For rotating motor

(only for MD5-HD14, HD14-2X/3X, ND14)

①For rotating the motor when driver power turns OFF, separate the motor from the driver.

(if not, the driver power turns ON)

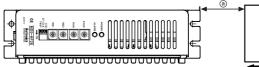

²For rotating the motor when driver power turns ON, use Hold OFF function.

4. For cable connection

- ①Use twisted pair (over 0.2mm²) for the signal cable which should be shorter than 2m.
- ⁽²⁾The thickness of cable should be same or thicker than the motor cable's when extending the motor cable.
- 3 Must separate between the signal cable and the power cable over 10cm.

5. For installation

- ①The unit must be installed with heat protection. The conditions of 2, 3 should be satisfied. (XMD5-ND14)
- ②In order to increase heat protection efficiency of the driver, must install the heat sink close to metal panel and keep it well-ventilated.
- ③Excessive heat generation may occur on driver. Keep the heat sink under 80°C when installing the unit. (at over 80°C, forcible cooling shall be required.)
- ④If the unit is installed in distribution panel, enclosed space or place with heat, it may cause product damage by heat. Install a ventilation. (only for MD5-HF28)
- ⑤ For heat radiation of driver, install a fan as below figure. (distance between the (a) fan and the unit: approx. within 70mm, b min. airflow: 0.71m³/min at least) (only for MD5-HF28)

	-		-
ക	Δir	FI	0

6. For using setting switches

- 1 Be sure that the TEST switch is OFF before supplying the power. If the TEST switch is ON, the motor operates immediately and it may be dangerous. (except MD5-ND14)
- ²Do not change any setting switch during the operation or after supplying power. It may cause malfunction.

7. Autonics motor driver does not prepare protection function for a motor.

- 8. This product may be used in the following environments.
 - ① Indoors
 - 2 Altitude max. 2,000m
 - ③ Pollution degree 2
 - ④ Installation category II
